

## □ AI Website Generator – Two Modes

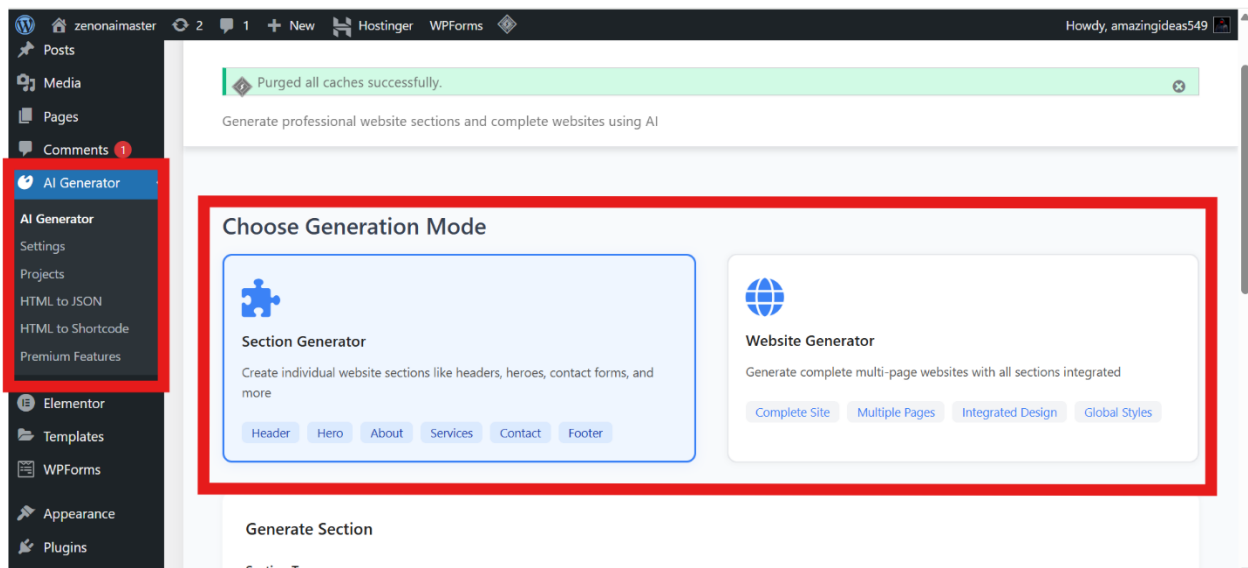

### □ AI Website Generator – Two Modes

#### 1. Section Generator Mode:

Generates individual sections like headers, footers, contact forms, FAQs, testimonials, etc., based on user prompts. Perfect for building or enhancing part of a page quickly.

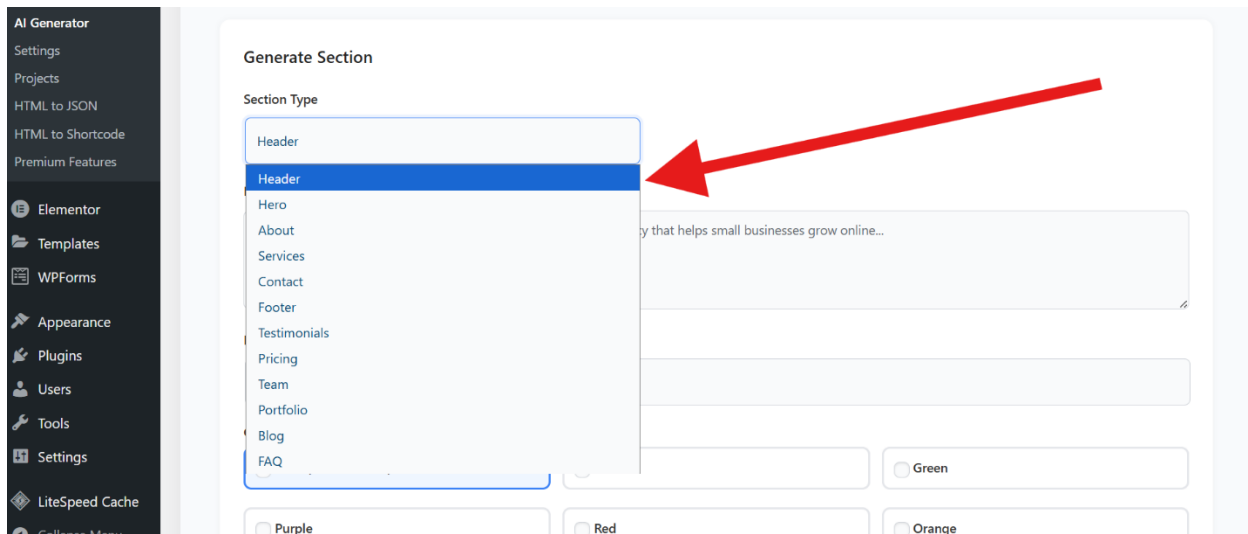

#### 2. Full Website Generator Mode:

Creates entire websites with multiple pages, intelligently structured based on the prompt. Includes homepage, about, services, contact, etc., generated dynamically with design consistency.

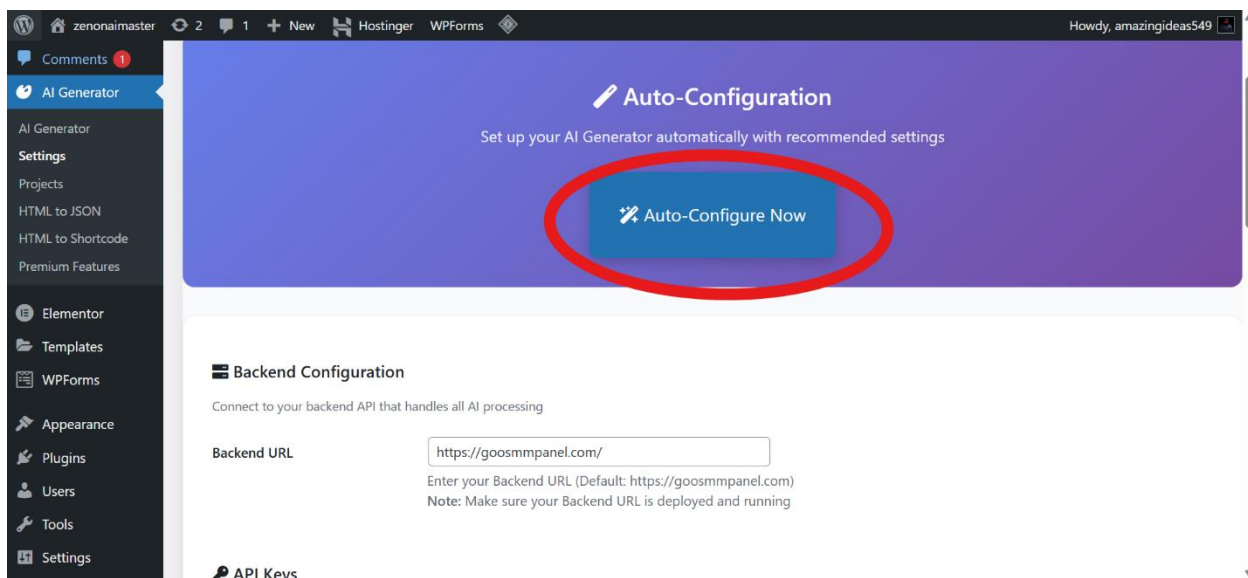

### 💬 Prompt-Based AI Generation

- Users type natural language prompts (e.g., "Create a modern portfolio site with a dark theme").
- The AI analyzes the request and builds the appropriate structure, layout, content, and style.
- Prompt system works across all features—sections, pages, styling, and structure.

## ⚙️ Settings Panel with Auto & Manual Configuration

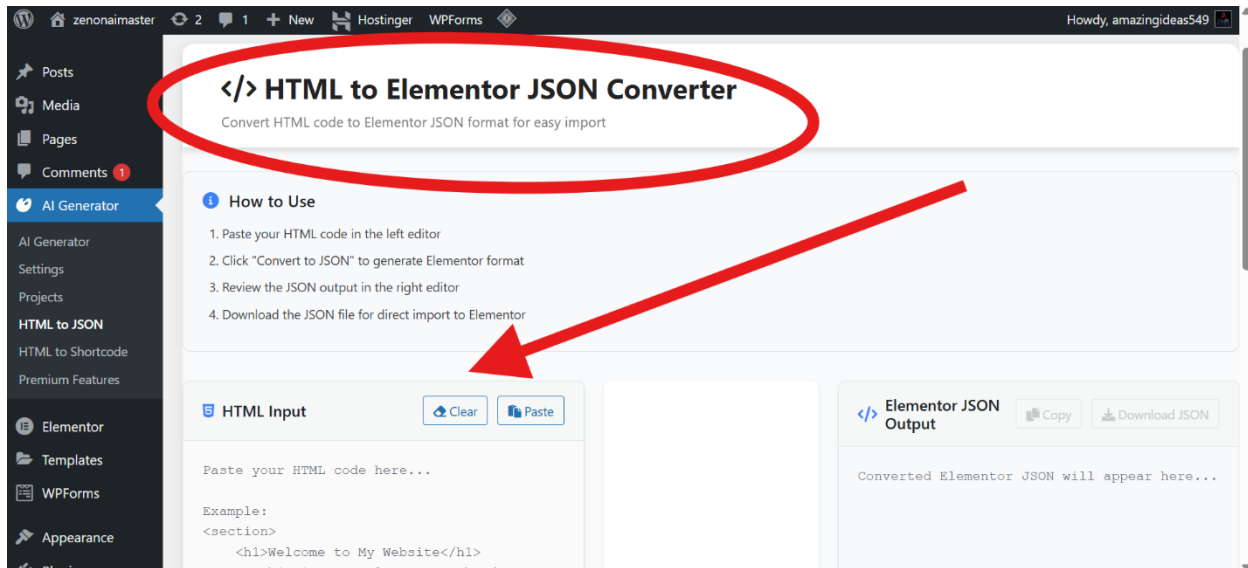

- **Auto Mode:** Automatically pre-fills OpenAI and Ideogram API keys, backend URLs, and other required configs.
- **Manual Mode:** Allows users to manually input or override these settings if needed (ideal for advanced users or troubleshooting).
- Helps users avoid hiring a developer just to change keys.

## 🔄 HTML to JSON Converter

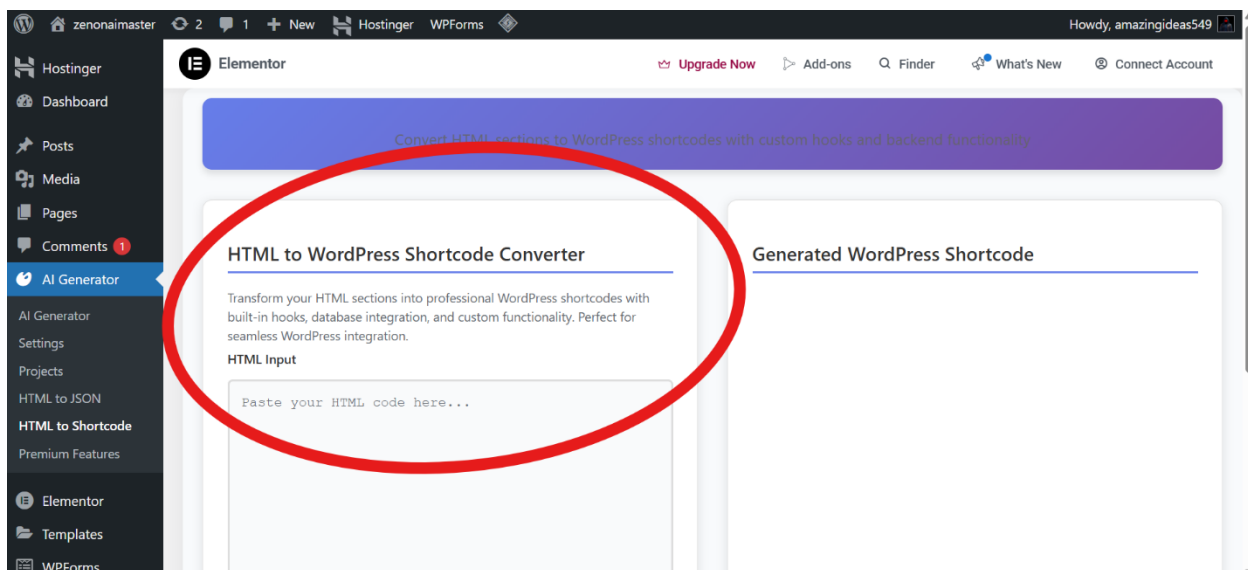

- Converts AI-generated HTML content into Elementor-compatible JSON format.
- Users can easily **import** the downloaded JSON into Elementor's template library.

- Supports images, text, layout structure, and design styles.

## ❏ HTML to Shortcode Converter (NEW)

- Converts HTML into **WordPress shortcodes** and PHP code using hooks.
- Allows users to paste output directly into WordPress posts/pages or theme files.
- Great for developers who want tighter backend integration or use in custom templates.

## 💎 Premium Features (User Subscription Based)

- Premium users unlock additional powerful features:
  - Advanced AI prompt support.
  - Access to high-quality pre-built templates.
  - Unlimited generations (Free users have limits).
  - One-click **key activation system** for licensed users.
  - Enhanced export options and white-label capabilities.
- Includes future-ready support for multi-language and agency branding.
